Information Technology graduate from Del Institute of Technology with strong dual expertise in Software Engineering and Artificial Intelligence. Experienced in building production-ready systems end-to-end, from scalable full-stack web platforms to training, evaluating, and deploying real-world machine learning models. Recently completed a six-month AI Engineering internship at InaAI, delivering AI solutions for enterprise clients. Seeking an AI Engineer and Software Engineer.

WORK EXPERIENCE

INaAI

Central Jakarta, DKI Jakarta

AI Engineer

February 2026 – August 2026

- Actively contribute to multiple real-world Artificial Intelligence projects over a 6-month internship, applying machine learning and data science techniques to solve practical problems.
- Develop, train, and evaluate AI models for various applications, ensuring optimal performance and accuracy in production-like environments.
- Collaborate with the engineering team to process datasets, refine algorithms, and integrate AI features into functional software systems.
- Built and deployed an end-to-end AI solution for PT Mayora Indah Tbk. Built and deployed an AI/ML solution for PT Prima Abadi Distribusi.

PT AOKI MORI INDONESIA

Siborongborong, North Sumatera

Web Developer

August 2025 – May 2026

- Developed a company profile website integrated with an information system and an online student registration platform, enabling prospective students to register directly through the website.
- Architected and built an e-learning platform facilitating seamless assignment submissions and a robust online examination system.
- Engineered the backend infrastructure utilizing Golang for high performance and scalability, paired with a responsive and dynamic frontend built with Next.js.
- Implemented a multilingual website (Japanese, English, Indonesian) with dynamic language switching.
- Designed and built responsive UI layouts aligned with the company's branding.

EDUCATION

Del Institute of Technology

Toba, North Sumatra

Associate Degree in Information Technology (3.70/4.00)

September 2023 – September 2026 (Expected)

ORGANIZATIONAL EXPERIENCE

Facilities and Infrastructure Division

Himpunan Mahasiswa Teknologi Informasi IT Del

Member

August 2024 – June 2025

SKILLS

- **Programming Languages:** Python, Golang, JavaScript, PHP,, C#, Dart
- **AI, Machine Learning & Data Science:** NLP, LLMs, RAG, Whisper, Computer Vision
- **Web & App Frameworks:** Next.js, React.js, Laravel, FastAPI, Node.js, Flutter, Streamlit
- **Databases:** PostgreSQL, MySQL, MongoDB, Qdrant

ACHIEVEMENT

- **Achievements (2025):** 3rd Winner, Coding Day Competition - Faculty of Vocational Studies (2025)

CERTIFICATION

- AWS Certified Machine Learning Specialty 2025 - Hands On

PROJECT UNDERTAKEN DURING STUDY

1.	Project Name	:	Implementation of Whisper ASR and DeBERTa v3 Base for Evaluating Coherence of IELTS Speaking Answers on the Web
	Period	:	August 2025 - February 2026
	Description	:	A web-based automated evaluation system for IELTS Speaking that integrates multiple NLP and speech processing models to analyze spoken language. Audio input is processed using Whisper for speech-to-text conversion and DeBERTa v3-Base evaluates semantic coherence between prompt and response. The system is deployed using FastAPI as the model-serving backend and Next.js as the frontend interface, returning structured scoring and corrected output to users.
	Tools & Skills	:	Google Colab, Python, FastAPI, Next.js, Whisper, REST Api Integration, PyTorch / Hugging Face Transformers, Machine Learning Model Deployment
	Role	:	Machine Learning Engineer
	Responsibility	:	1. Data collection 2. In models built using the python language 3. Integrations model to frameworks.
2.	Project Name	:	Student Stress Level Prediction Using Ensemble 1D-CNN and XGBoost
	Period	:	August 2025 – December 2025
	Description	:	A machine learning project designed to predict student stress levels (Distress, Eustress, No Stress) using questionnaire-based dataset. The model integrates deep learning (1D-CNN) feature extraction with XGBoost classification to improve accuracy, macro-F1 score, and performance on minority stress categories. The system is deployed locally via Streamlit with automatic CPU/GPU switching.
	Tools & Skills	:	Python, Streamlit, Flask, XGBoost, Pandas, NumPy, TensorFlow, Keras
	Role	:	Machine Learning Engineer & Full-Stack Model Deployment
	Responsibility	:	1. Conducted data preprocessing, feature engineering, and SMOTE balancing. 2. Designed and trained a 2-Block 1D-CNN model for embedding extraction. 3. Integrated CNN embeddings with optimized XGBoost ensemble. 4. Performed model performance analysis using classification report & confusion matrix 5. Built and deployed an interactive Streamlit web application
3.	Project Name	:	IT Del Student Information Management System

	Period	:	January 2025 - July 2025
	Description	:	Built a web-based student information management system using Laravel + Inertia.js + React with 24 functional features and 4 system roles. Enabled students to access real-time campus information (BEM, academic updates, and announcements), improving information
	Tools & Skills	:	Laravel Inertia, PostgreSQL
	Role	:	Full Stack Developer
	Responsibility	:	1. Developed the full-stack architecture using Laravel and Inertia.js, integrating backend logic with reactive frontend components 2. Designed a secure database schema in PostgreSQL to support scalable data management for 24 features. 3. Implemented Role-Based Access Control (RBAC) to ensure secure authentication and authorization for 4 distinct system roles. 4. Built responsive user interfaces with React, ensuring a seamless experience across different devices.
4.	Project Name	:	Design and Development of the DelCheckIn Application
	Period	:	Augustus 2024 - December 2024
	Tools & Skills	:	DelCheckIn is a mobile application designed to facilitate and digitize the attendance process for students and staff at Institut Teknologi Del. The system simplifies check-in and check-out activities using real-time authentication and centralized data storage.
	Role	:	Flutter (Dart), Firebase Authentication, Firebase Firestore, Firebase Storage, Provider / State Management
	Responsibility	:	Mobile Application Developer
